

## **Nit Spray/Comb-out Process**

1. Wet hair down. Place the Littlebugs Nit Spray product (15-20 pumps depending on length of hair) generously through the hair, working it into the roots. Let the product sit for 5 minutes.
2. Re-apply the Littlebugs Nit Spray and allow to sit for another 5 minutes. The Nit Spray product helps dissolve the glue that adheres the egg to the hair shaft.
3. Combine 1/3 conditioner and 2/3 water in a spray bottle and spray the hair down to ease the combing process.
4. Comb the hair in all 4 directions taking larger chunks of hair. After several swipes through the hair wipe the comb on a white paper towel to monitor debris. You will comb out debris for several days but your debris will be less every day. You will continue to comb for approximately 5 days until you have 2 consecutive clean comb outs.
